Abnormalities

- **A2 First-Ever YoY Declines (from Sep 2025)**
  China entered outright YoY contraction from Sep 2025: -3.6% Sep, -9.2% Oct, -15% Nov, -17% Dec, -10.7% Jan 2026, -14.6% Feb 2026. Structural deterioration separate from LNY timing. Root cause not confirmed — likely competitive dynamics and organic traffic decline.

  YoY growth rate declined materially from Sep 2025 vs prior years by -53.7pp, steeper than seasonal norms. Monitoring continues into Q1 2026. Note: this figure is significantly inflated by LNY timing effects — underlying structural decline estimated at -10-15pp.
- **A1 LNY Timing: Extreme Optical -45.6% YoY Mar 2026**
  LNY 2026 fell Feb 17 vs Jan 29 in 2025 — 19-day shift. Mar 2026 remains in trough while Mar 2025 was already in full recovery, creating ~-93pp optical distortion. Real decline estimated at -10-15% YoY. Timing artefact — not standalone business signal.
- **A3 LNY Timing: +45.5% YoY Spike Jan 2024**
  LNY 2024 fell Feb 10 vs Jan 22 in 2023 — inflated Jan 2024 (post-holiday) vs Jan 2023 (pre-holiday). Pure calendar artefact. Creates inflated base depressing Jan 2025 comparison (only +12.2% YoY).

- **S1 Golden Week (Apr 29 - May 6)**
  Cluster of national holidays creating a reliable early-May dip. Dates stable year-over-year. Obon (Aug 13-16) creates a secondary summer dip.

Abnormalities

- **A6 Extraordinary Growth Spike Apr-Jul 2023 (+127-152% YoY)**
  The most extreme acceleration event in the dataset — likely viral product-market fit and/or major local marketing. Creates very high base compressing all subsequent YoY. 2024 growth (+75-103%) appears to decelerate sharply due solely to this base.
- **A16 Growth Rate Deceleration from Mar 2026**
  YoY growth rate declined materially from Mar 2026 vs prior years by -40.2pp, steeper than seasonal norms. Monitoring continues into Q1 2026. Note: partially inflated by exam season base effect in Mar 2026 — interpret with caution.
- **T2 Post-AI Normalisation**
  YoY growth has decelerated since 2023, compounded by the exceptionally high Apr-Jul 2023 base unique to South Korea.

Major Moving Holidays & Seasonal

- **S1 Lunar New Year (Seollal)**
  Shifts 2-4 weeks Jan-Feb each year. Creates YoY distortion in the Jan-Mar window.

Abnormalities

- **A7 Unexplained Spike Jan 2024 (+86.5% YoY)**
  Major acceleration event in January 2024 with no confirmed cause — likely large marketing campaign or product event. Creates heavily inflated base: Aug-Dec 2024 showed -62 to -105pp swings vs prior year. Partially reverting by Jan 2025 (+23.1% YoY).
- **A16 Growth Rate Deceleration from Oct 2025**
  YoY growth rate declined materially from Oct 2025 vs prior years by -22.2pp, steeper than seasonal norms. Monitoring continues into Q1 2026.

All chart annotations in red | **A** Abnormal **S** Seasonal **T** Structural trend

Abnormalities

- **A5 LNY + Ramadan Compound Suppression (Feb 2026)**
  For first time, LNY (Feb 17) and Ramadan start (Feb 28) landed in same month. Combined suppression created sharpest deceleration on record for Indonesia. Recovery expected sharply post-Eid (~Mar 30). Not structural — compound holiday timing artefact.
- **A16 Growth Rate Deceleration from Sep 2025**
  YoY growth rate declined materially from Sep 2025 vs prior years by -11.2pp, steeper than seasonal norms. Monitoring continues into Q1 2026.
- **T2 Post-AI Normalisation**

Major Moving Holidays & Seasonal

- **S1 Ramadan**
  Shifts ~11 days earlier each year. Usage dip during fasting hours. Requires calendar-adjusted YoY comparisons.
- **S2 Eid al-Fitr (Lebaran)**
  Largest Indonesian holiday — multi-day celebration after Ramadan. Creates sharp spike then travel-driven dip. Also shifts ~11 days earlier per year.
- **S3 Eid al-Adha**

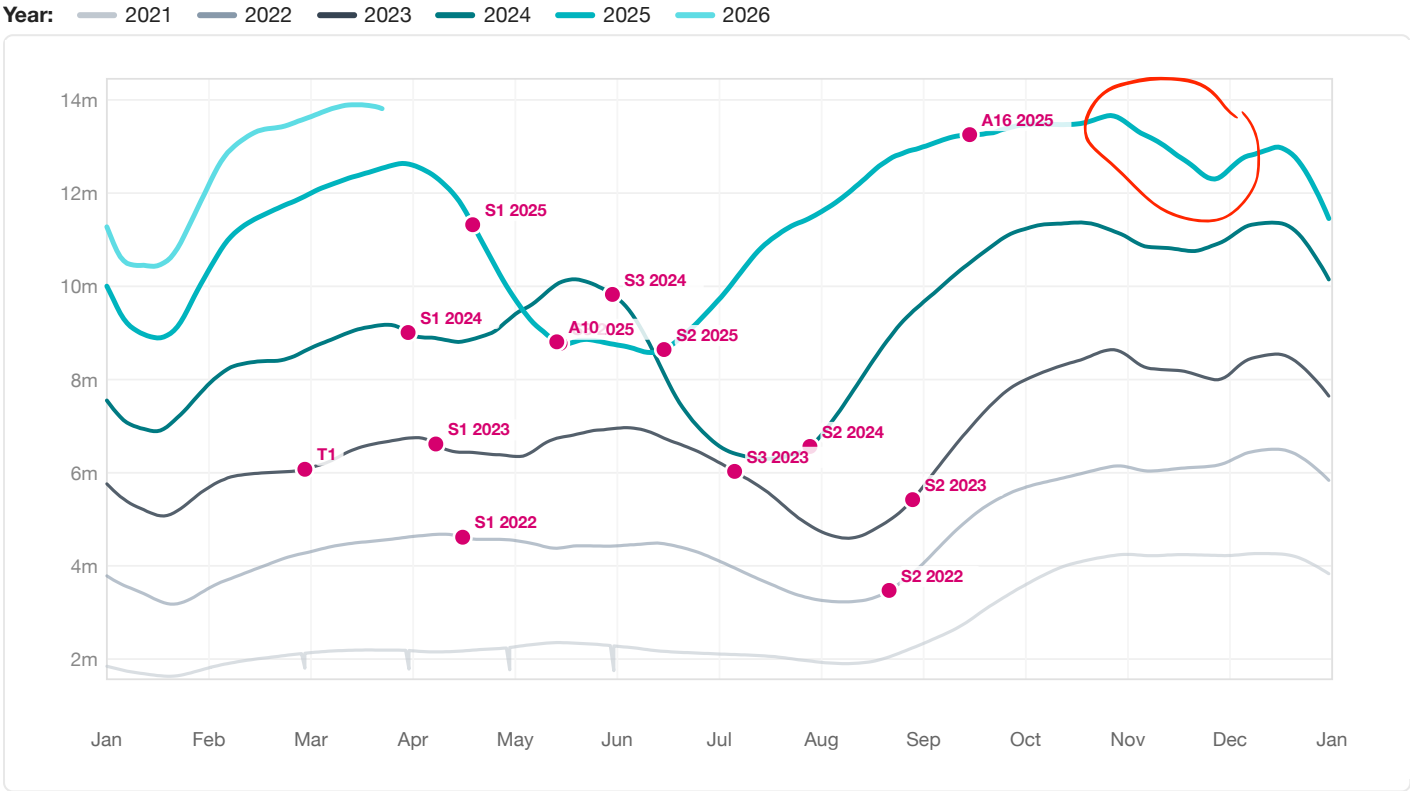
2023	Apr 6-10	Aug 22 2022	Jul 7 2023
2022	Apr 14-18	—	—



All chart annotations in red | **A** Abnormal **S** Seasonal **T** Structural trend

Abnormalities

- **A10 Anomalous May 2025 Trough (-8.5% YoY, -56pp Swing)**
  No confirmed holiday or event explanation. Likely data/classification issue or inflated May 2024 base. Jul 2025 spike (+67.6% YoY) is partial unwinding of this base effect — not a real acceleration.
- **A16 Growth Rate Deceleration from Sep 2025**
  YoY growth rate declined materially from Sep 2025 vs prior years by -47.0pp, steeper than seasonal norms. Monitoring continues into Q1 2026. Note: significantly inflated by the May 2024 spike base effect — underlying deceleration is materially smaller.
- **S2b Academic Year Multi-Year Calendar Shift**
  Philippines academic year has shifted significantly each year post-COVID: Aug 22 start / Jul 7 end (2022-23), Aug 29 / May 31 (2023-24), Jul 29 / May 16 (2024-25), Jun 16 / Mar 31 (2025-26). Each year the start moves ~1-2 months earlier, progressively shifting the engagement lift window forward. The 2025-26 end date of Mar 31 2026 is unusually early and likely suppresses Q1 2026 MAU. YoY comparisons require full academic-calendar alignment — calendar-month comparisons are unreliable for this market.
- **T2 Post-AI Normalisation**
  YoY growth has decelerated since 2023 as the inflated base rolls through comparisons.

Major Moving Holidays & Seasonal

- **S1 Easter (Holy Week)**
  One of the strongest Easter effects globally — entire Holy Week (Mon-Sun) widely observed. Shifts 2-4 weeks Mar-Apr creating significant YoY distortion.
- **S2 Academic Year Start**
  Start date has shifted significantly each year due to post-COVID transition: Aug 22 (2022), Aug 29 (2023), Jul 29 (2024), Jun 16 (2025), ~Jun (2026). Creates a moving engagement lift that changes position by 1-2 months annually. Cannot be compared year-over-year without aligning to the academic calendar, not the calendar month.
- **S3 Academic Year End**
  End date also shifts: Jul 7 (2023), May 31 (2024), May 16 (2025), Mar 31 (2026). Each year-end creates a engagement trough as students finish. The

Mar 31 2026 end is unusually early and may suppress Q1 2026 MAU.

  Thailand is countercyclical — Jul-Sep is the annual peak (school winter projects), not a trough. Do not apply Northern Hemisphere summer trough assumptions to Thailand.
- **T2 Post-AI Normalisation**
  YoY growth has decelerated since 2023 as the inflated base rolls through comparisons.

Major Moving Holidays & Seasonal

  Tết 2026 fell Feb 17 vs Tết 2025 Jan 29 — 19-day shift. Mar 2026 still in trough while Mar 2025 had fully recovered. Not structural — daily recovery visible from Mar 9 2026. Feb 2026 figure (+42.4% YoY) is the reverse inflation.
- **A16 Growth Rate Deceleration from Mar 2026**
  YoY growth rate declined materially from Mar 2026 vs prior years by -35.1pp, steeper than seasonal norms. Monitoring continues into Q1 2026. Note: significantly inflated by Tết timing effects in Mar 2026 — not representative of underlying trend.

Major Moving Holidays & Seasonal

- **S1 Tết (Lunar New Year)**
  Largest holiday of the year. Shifts 2-4 weeks Jan-Feb (Jan 29 in 2025 vs Feb 17 in 2026). Creates deepest annual MAU trough. Jan-Mar YoY comparisons require Tết-aligned adjustment.
